

**UNIVERSITI TEKNOLOGI MALAYSIA
FACULTY OF COMPUTING
SESSION 2023/2024 SEMESTER 2**

Code & Subject: SECV2113 – Human Computer Interaction
Name of Lecturer: Dr Nur Zuraifah Syazrah Othman
Submission Date: 20 April 2024

ASSIGNMENT 1 (Group of 3) 20 marks

Find an example of a **persuasive technology that contributes to any ONE of the 17 Sustainable Development Goals**. "Technology" could mean an app, system, website, device, product, or any solution. Your chosen example must not be the same with other groups in your class.

- a) Provide a brief description on the technology that you have chosen – generally, what is its purpose? (e.g. environmental awareness, managing diseases, living happily etc.)
- b) The Fogg Behavior Model asserts that for a target behaviour to happen, a person must have sufficient motivation, sufficient ability, and an effective trigger (note: trigger is now referred to as '[prompt](#)'). Describe **TWO** specific task or feature of technology that requires the user to execute a "target behaviour". By referring to the Fogg Behavior model in the reference paper given, discuss how the three principal factors (trigger, motivation, ability) persuade the user to execute *that* task or feature.
- c) To support your discussion for (b), please also include a short video (you can screen record, or simply record the video using your phone) that demonstrates how the user is persuaded to execute that "target behaviour". In the video, you must highlight the design elements that represents trigger, motivation, and ability, and how it combines to persuade a behaviour. Each video (one for each task) should be no more than 3 minutes.
- d) Choose one feature of the technology which in your opinion fail to persuade a user to execute the target behaviour. Using the FBM, discuss on why you think it fails and give suggestions/recommendations how the design of that feature can be improved. Please provide examples (with pictures) to support your discussions.

Please prepare all your answers in a Microsoft Word document with appropriate pictures/images in your discussion for better illustration. Place the document together with the videos in a folder, compress it and name the compressed folder as *YourGroupNumber_Assg1.docx* and submit it to Assignment 1 Submission link through UTM e-learning.

Slide and Paper Reference:

Topic 2 Slide - Cognition and Emotional Interaction

Reference Paper - Fogg, Brian J. "A behavior model for persuasive design." *Proceedings of the 4th international Conference on Persuasive Technology*. ACM, 2009.

Extra Notes:

For question (b), students need to discuss based on the reference paper and must link it with how the technology was designed to support it. Brief example:

- 1) **What is the feature?** Facebook tag (When someone tagged you in a photo, Facebook sends you a notification on your phone where you can immediately click to view that photo in Facebook).
What is the target behaviour? Click notification link to view tagged photo.

Discuss on:

Ability – the notification to view tagged photo is “inserted” in a routine of the user (checking phone)

Motivation - user has high motivation to click on that link because of social acceptance/rejection.

Trigger – facilitator: The link is embodied in text, which facilitates in making the behaviour easier – just need to click it.

Remember, the above are just brief points, in your submission, each point must be elaborated.

- 2) **What is the Feature?** A shopping website’s Buy Item Now! (When there is a discounted item, the item can only be bought at a limited time only).

What is the target behaviour? - Click link to buy the item immediately.

Discuss on:

Ability – it’s easy (how does the design support this, discuss based on FBM)

Motivation – hope and fear (fear that the item will be gone in an instant, discuss based on FBM)

Trigger – spark: text that highlights the words “for a limited time only!!” (discuss based on FBM)

Remember, the above are just brief points, in your submission, each point must be elaborated.

Rubric (Total 20m)

Item/scale	Absent (0)	Minimal (1)	Moderate (2)	Good (3)	Excellent (4)	Weight	Score
Question (a) - purpose of the technology	No identified purpose	Identified purpose(s) with no explanation	Identified purpose(s) with minimal explanation	Identified purpose(s) with good explanation	Identified purpose(s) with good, clear explanation	0.5	/2
Question (b) - TWO specific task or feature to persuade user to execute a “target behaviour”	No task provided	Description of only ONE specific task or feature with minimal discussion on trigger, motivation, and ability	Description of TWO specific task or feature with minimal discussion on trigger, motivation, and ability	Description of TWO specific task or feature with clear discussion on trigger, motivation, and ability	Description of TWO specific task or feature with clear and substantial explanation on trigger, motivation, and ability	1.5	/6
Question (c) - Short video demonstration on how the user is persuaded to	No videos provided	Video provided for only ONE of the tasks	Video provided for BOTH of the tasks	Video provided for BOTH of the tasks	Video provided for BOTH of the tasks	2	/8

execute a “target behaviour”			But do not highlight the design elements that represents trigger, motivation and ability	With highlight on the design elements that represents trigger, motivation, and ability, but lacking clarity on how it combines to persuade a behaviour.	With highlight on the design elements that represents trigger, motivation, and ability, that clearly demonstrate how it combines to persuade a behaviour.		
Question (d) – a feature that fail to persuade a target behaviour	None provided	Identified the failed feature, and provide supporting images but discussions on why it fails, and how to improve the design is not based on the FBM	Identified the failed feature, and provide supporting images but discussions on why it fails, and how to improve the design is minimally based on the FBM	Identified the failed feature, and provide supporting images and good discussions based on the FBM on why it fails, and how to improve the design	Identified the failed feature, and provide supporting images and good, concrete discussions based on the FBM on why it fails, and how to improve the design	1	/4

20/20 = 10%
